

Creators only learn after they publish.

For LinkedIn and Instagram educators with 10k-100k followers, one misunderstood post can cost trust, reach, and hours of recovery.

The missing step: a pre-publication audience test

The audience data already exists

It is trapped inside comments.

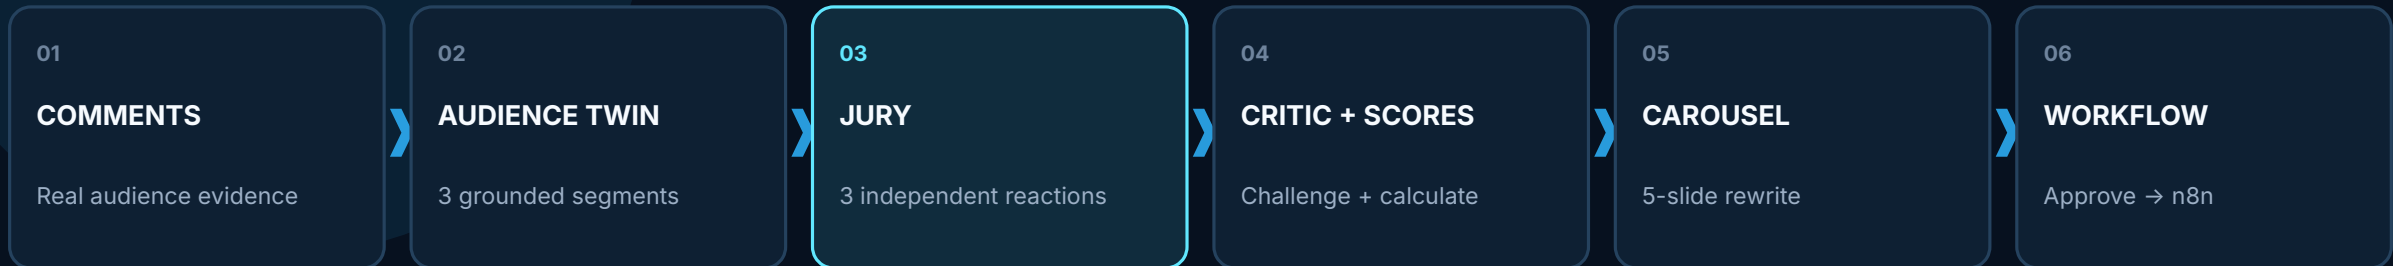

- Generic AI writes for "an audience," not your audience.
- Analytics arrive after the risk.
- Comments stay unstructured and unused.

Pain today

Post → wait → learn publicly

Thunder is an audience pre-flight lab.

It converts real historical comments into a reusable audience model, tests a draft across three independent AI jurors, and rewrites it before publication.

WHY THIS IS 10× BETTER THAN A GENERIC CHAT

One sentence **"Test your post before your audience does."**

One weak draft. Three audiences. One safer carousel.

A seeded creator example from the current Thunder workflow.

ORIGINAL HOOK

"Post every day or you will never grow."

OPTIMIZED HOOK

"You don't need to post every day. You need a system that survives a full-time job."

AUDIENCE JUROR

Quiet Beginners

Need a gentle first step

Feels shaming; likely to skip

C01 · C02 · C07 · C12

AUDIENCE JUROR

Busy Professionals

Need a 20-minute system

Relevant, but too vague

C03 · C06 · C08 · C13 · C15

AUDIENCE JUROR

Hustle Skeptics

Need nuance and rest

Will challenge the absolutes

C04 · C05 · C09 · C10 · C11 · C14

SCORES

Fit 52 → **73**

Clarity 36 → **66**

Save 38 → **62**

Discuss 64 → **66**

Risk 77 → **52**

Risk ↓ is better

OPTIMIZED 5-SLIDE CAROUSEL

01 Consistency ≠ daily

02 Who this is for

03 20-minute plan

04 Beginner vs busy-pro

05 When NOT to post

Start with creators who already have the data.

The wedge is not "all businesses." It is comment-rich LinkedIn and Instagram educators who publish repeatedly and cannot afford public misfires.

BEACHHEAD

LinkedIn + Instagram educators

10k-100k followers · high-comment posts · no dedicated analyst

- Career and productivity creators
- Technical educators and founders
- Creator agencies managing multiple voices

90-DAY VALIDATION PLAN

- 01 20 design partners** Run 3 pre-flight tests per creator each week.
- 02 Measure acceptance** Track which recommendations creators keep or reject.
- 03 Compare outcomes** Use each creator's own save/comment baseline after publishing.

BUSINESS MODEL

Free 3 tests / month

Pro \$29 / month

Unlimited tests + history + assets

Studio \$99 / month

Multiple brands + approvals + n8n workflows

SUCCESS METRIC

Repeat tests / week + accepted edits + lift vs creator baseline

Would I use it myself?

Yes — for technical and career content before publishing on LinkedIn.

Content generation is abundant. Audience understanding is scarce.

Thunder turns the creator's own comment history into a private rehearsal environment — before the public decides.

WHY NOW

AI has made content cheap.

Trust, fit, and distinctiveness are now the bottleneck.

- Every established creator already owns years of audience comments.
- Generative tools optimize output; Thunder optimizes interpretation.

WHY ME

Harshvardhan Joshi

Solo builder · M.Sc. Data Science · software + AI engineering

- Backend, automation, and production software experience
- Hands-on work with LLM agents and robust validation
- Built the working vertical slice as a one-person team

Next step

Pilot with 20 creators. If repeated pre-flight testing improves their confidence and outcomes, I would keep building Thunder.
